

**IN THE SPECIFICATION**

The specification is amended below with replacement paragraph showing added text with underlining and deleted text with ~~striketrough~~.

Please **REPLACE** paragraph 18 on page 3 as follows.

PK  
Inside the boundary of the subscriber's home, as shown in FIG. 1, the DSL modem 13 may be connected via an ethernet connection 19 to a television call manager 24. The television call ~~monitormanager~~ manager 24, described in detail in FIG. 4, could be integrated with an existing set-top box, such as a cable box or satellite receiver, or could be a stand alone piece of equipment which is connected to an entertainment center, i.e., a television, in some manner. Alternatively, the television call manager 24 could be implemented as an application on a personal computer located in the subscriber's home. Such an embodiment would require off-the-shelf hardware accessories connected to the personal computer together with software to operate the accessories. Such hardware and software will not be described herein but is commonly understood by those skilled in the art.
